DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-79 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-75 of copending Application No. 09/992,445. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims disclose a process for producing a dilute ethylene stream and a dilute propylene stream from a cracked gas stream using essentially the same steps.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to separate a C_3^+ stream in a depropanizer zone to produce a C_3 stream and a C_4^+ stream rather than a C_3^- stream and a C_4^+ stream because both the C_3^- stream and the C_3 stream are both capable of producing propylene when reacted in a MAPD reactor zone..

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

Claims 80-86 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not disclose a process for producing a dilute ethylene and propylene stream whereby the dilute propylene stream is passed to a dilute propylene derivative unit and the dilute propylene unit produces cumene, acrylic acid, or propylene oxide.

Response to Arguments

The applicant's arguments have been fully considered and are deemed persuasive. New grounds of rejection, however, are set forth in this office action.
